## REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance:

### Claim 1

Claim 1 recites a commodity order issuing and accepting method, comprising *inter alia*: transmitting a second electronic document on which said transaction condition is described and which has a second input field for said order issuer's payment date to said order issuing device; inputting said order issuer's payment date into said second input field on said order issuing device; and transmitting said order issuer's payment date to said order accepting device, wherein said second electronic document comprises a formula for calculating a payment price based on said order issuer's payment date which is determined by said order issuer, and a due payment date, a delivery date, a maximum discount rate and a regular price which are determined by an order acceptor, said formula complying with said transaction condition.

The most closely applicable prior art of record is U.S. Patent No. 6,578,014 to Murcko, Jr. Murcko discloses a method and apparatus for effectuating post-transaction-priced transactions of information, goods, and services in exchange for money (abstract). Murcko discloses a buyer specifying an item request wherein the buyer indicates that he/she is willing to pay or an approximate amount or he/she can split between sellers (col. 27, lines 50-55). Murcko discloses a payment amount which stores the amount that the buyer decides to pay for the item and a payment date which stores the date on which the buyer assigns the payment amount for the item (col. 16, lines 58-61). Murcko also discloses a buyer can optionally provide guidance (Figure 17,

Art Unit: 3627

ref. no. 1714) about what payment amount they might be willing to pay for the desired item (col. 27, lines 65- 67). Furthermore, Murcko also discloses a buyer has the ability to change payment amounts that he/she previously assigned, up to the time the payment is made; and a buyer can also raise a payment amount, but cannot lower it, once it is initially sets (col. 29, lines 15-21). Murcko discloses the buyer and sellers have the ability to optionally transact through traditional protocols such as auction, negotiation, buyer sets price before transaction, and sellers sets price before transaction (col. 29, lines 47-50). However, Murcko neither anticipates nor renders obvious in teaching a commodity order issuing and accepting method, comprising *inter alia*: transmitting a second electronic document on which said transaction condition is described and which has a second input field for said order issuer's payment date to said order issuing device; inputting said order issuer's payment date into said second input field on said order issuing device; and transmitting said order issuer's payment date to said order accepting device, wherein said second electronic document comprises a formula for calculating a payment price based on said order issuer's payment date which is determined by said order issuer, and a due payment date, a delivery date, a maximum discount rate and a regular price which are determined by an order acceptor, said formula complying with said transaction condition.

Benton et al. (U.S. Patent No. 4,926,325) neither anticipates nor renders obvious in teaching a commodity order issuing and accepting method, comprising *inter alia*: transmitting a second electronic document on which said transaction condition is described and which has a second input field for said order issuer's payment date to

Art Unit: 3627

said order issuing device; inputting said order issuer's payment date into said second input field on said order issuing device; and transmitting said order issuer's payment date to said order accepting device, wherein said second electronic document comprises a formula for calculating a payment price based on said order issuer's payment date which is determined by said order issuer, and a due payment date, a delivery date, a maximum discount rate and a regular price which are determined by an order acceptor, said formula complying with said transaction condition. Benton teaches a system and method for carrying out funds data transfer between buyers and sellers in a common location, a local mode of operation, or at different locations in a remote mode (col. 2, lines 50-52; col. 2, lines 59- 61). Benton further teaches the prompting of the buyer to enter the date and time of the proposed transaction (col. 16, lines 38-40). The buyer is prompted to enter the authorization code and transaction amount (col. 9, lines 42-44). The buyer is then prompted for a time and date after which the transaction is permitted to proceed (col. 9, lines 51-53).

#### Claim 4

Claim 4 recites a commodity order issuing and accepting system, comprising, *inter alia*: means for transmitting a second electronic document on which said transaction condition is described and which has a second input field for said order issuer's payment date from said order acceptor side to said order issuer side; means for inputting said order issuer's payment date to said second input field on said order issuer side; and means for transmitting said order issuer's payment date from said order issuer side to said order acceptor side, wherein said second electronic document comprises a

Art Unit: 3627

formula for calculating a payment price based on said order issuer's payment date which is determined by said order issuer, and a due payment date, a delivery date, a maximum discount rate and a regular price which are determined by an order acceptor, said formula complying with said transaction condition. The commodity order issuing and accepting system is allowable over the prior art of record for reasons consistent with those identified above with respect to claim 1.

#### Claim 7

Claim 7 recites a commodity order accepting apparatus, comprising, *inter alia*: means for transmitting a second electronic document on which said transaction condition is described and which has a second input field for said order issuer's payment date to said order issuer side; means for receiving said order issuer's payment date which have been input to said second input field on said order issuer side from said order issuer side, wherein said second electronic document comprises a formula for calculating a payment price based on said order issuer's payment date which is determined by said order issuer, and a due payment date, a deliver date, a maximum discount rate and a regular price which are determined by an order acceptor, said formula complying with said transaction condition. The commodity order accepting apparatus is allowable over the prior art of record for reasons consistent with those identified above with respect to claim 1.

#### Claim 10

Claim 10 recites a commodity order accepting apparatus, comprising, *inter alia*: when the receiving module receives said order issuer information and said commodity

Art Unit: 3627

order issuance information except for said order issuer's payment date from said order issuing device, the retrieving module retrieves a transaction condition corresponding to said commodity order issuance information and the transmitting module transmits a second electronic document on which said transaction condition is described and which has a second input field for said order issuer's payment date to said order issuing device, the receiving module receives said order issuer's payment date from said order issuing device, and wherein said second electronic document comprises a formula for calculating a payment price based on said order issuer's payment date which is determined by said order issuer, and a due payment date, a delivery date, a maximum discount rate and a regular price which are determined by an order acceptor, said formula complying with said transaction condition. The commodity order accepting apparatus is allowable over the prior art of record for reasons consistent with those identified above with respect to claim 1.

#### Claim 37

Claim 37 recites a commodity order issuing and accepting method, comprising, *inter alia*: transmitting a second electronic document on which said transaction condition is described and which has a second input field for said order issuer's payment date to said order issuing device; inputting said order issuer's payment date into said second input field on said order issuing device; transmitting said order issuer's payment date to said order accepting device, and wherein said second electronic document comprises a formula for calculating a payment price based on said order issuer's payment date which is determined by said order issuer, and a due payment date, a deliver date, a

Art Unit: 3627

maximum discount rate and a regular price which are determined by an order acceptor, said formula complying with said transaction condition. The commodity order issuing and accepting method is allowable over the prior art of record for reasons consistent with those identified above with respect to claim 1.

### ***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

The article "Calculating a discounted price" discloses the calculation of a discounted price by multiplying a discount and the original price of an item and getting a discount answer, then subtracting the original price from the discount answer, thus getting a final discounted price.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
